PUBLISSO is an open access publishing platform for the life sciences. It offers a variety of open access publishing opportunities to scientists. PUBLISSO is also a reliable partner for information specialists or researchers in need of advice regarding open access publishing.

The Living Handbooks project is part of the PUBLISSO platform. Currently, 4 books are being published. They combine scientific expertise in different areas of research (Hand Surgery, Cold Chain Management, Urology And Medical Psychology and Sociology) from all over the world and are freely accessible and permanently citable. The books can be enhanced by added research data or videos. As science advances, the Living Handbooks can easily be kept up-to-date, while the quality stays assured thanks to the international editorial boards and the obligatory peer review process. Soon it will be possible to publish also journals and conferences on the PUBLISSO platform.

PUBLISSO also offers a green open access publishing platform for the life sciences. By using persistent identifiers (DOIs), permanent online accessibility is ensured, as well as maximum visibility thanks to the integration in national library catalogues and specialized portals.

With PUBLISSO, ZB MED – Information Centre for Life Sciences offers an innovative platform that ensures permanent citability and international accessibility of scientific results. Additionally, the research library is established as a competent partner for scientists concerning open access publishing and develops a flexible open source platform that can be subsequently used by other institutions.
